Notes

Many thanks to the late Geoff Halligey for the updates, additions and corrections of the original list. Without his assistance this list would not have been possible.

Stations marked in RED may no longer be operational on the frequency indicated and any reception reports on these stations would be most welcome to the email address below.

Some Meteorological stations transmitting weather maps and information have been included because they transmit marine information.

Where a Ship transmit frequency is marked as 2182 kHz this is for the initial call to the Coastal Station who will either respond on its indicated working frequency or on 2182 kHz. The ship station will then QSY to its preferred working frequency in agreement with the Coastal Station

You are reminded that it is an Offence in the United Kingdom, and many other countries to listen to maritime traffic on the listed frequencies without an appropriate licence.

Should you find any errors or have any additions to the list then please email me with the details and source of the information you are providing, and I will be pleased to correct, delete or add to the list.
